

Christo Puthanpurackal – Complete AI / RAG Portfolio

Professional Summary

Junior AI Engineer at Urbanex Analytics Pvt Ltd with a Computer Science background and experience in Python, AI, Machine Learning, Data Science, Computer Vision, and real-world AI projects. Passionate about intelligent systems, practical AI applications, and continuous learning.

Education

B.Tech Computer Science & Technology – APJ Abdul Kalam Technological University (2020–2024)

CGPA: 6.72

Completed Data Science & Artificial Intelligence course at IPSR.

Current Role

Junior AI Engineer at Urbanex Analytics Pvt Ltd.

Work includes AI-based solutions, data preprocessing, model development and machine learning workflows.

Current Project

Government-based violence detection project using YOLO object detection.

Responsibilities: dataset collection, data preparation, organizing data and supporting model training.

Internships

Python Developer Internship (3 months): Developed business-management software similar to Vyapar using Python and Flask.

Data Science & AI Internship – IPSR Solutions.

Projects

AI Medical Assistant using RAG

Brain Tumor & Alzheimer's Detection

Stroke Prediction

Autism Prediction

Social Network Prediction

Travel & Tourism Management System

Technical Skills

Python, SQL, TensorFlow, Keras, Flask, FastAPI, YOLO, Machine Learning, Computer Vision, NLP, Pandas, NumPy, MySQL, Data Visualization

Strengths

Strong determination

Quick learner

Problem-solving mindset

Interests & Hobbies

Computer Vision, intelligent detection systems, AI applications, technology exploration and driving.

Complete RAG Knowledge Base – Questions & Answers

Q: Why did you choose Computer Science?

A: I chose Computer Science because I was always curious about technology and how software works behind the scenes. I liked creating solutions for real-world problems. During my studies, I became interested in programming and problem-solving.

Q: Why did you move toward AI/Data Science?

A: After completing BTech, I wanted a field combining programming with practical problem solving. AI and Data Science attracted me because of healthcare, prediction systems, automation and intelligent decision-making applications.

Q: What first got you interested in technology?

A: Curiosity about computers, software and how technology impacts daily life started my interest.

Q: What motivates you professionally?

A: Continuous learning, challenging projects and building solutions that create value motivate me.

Q: What exactly do you do as a Junior AI Engineer?

A: I contribute to AI solutions, data collection, preprocessing, model development and support machine learning workflows.

Q: Which technologies do you use there?

A: Python and AI/ML technologies, especially YOLO for object detection, data processing and model training.

Q: What projects are you handling now?

A: A government-based violence detection project using AI and YOLO.

Q: Achievements in current role?

A: Gaining hands-on experience in real-world AI and contributing to a government initiative.

Q: What did you build during internship?

A: Business management software similar to Vyapar handling customer details, billing and inventory.

Q: Biggest challenge during internship?

A: Understanding client requirements and converting them into practical features.

Q: Top 3 strengths?

A: Strong determination, quick learner and problem-solving mindset.

Q: Weakness?

A: Improving communication and presentation skills through practice.

Q: How would teammates describe you?

A: Dedicated, supportive, responsible and focused.

Q: Leadership style?

A: Comfortable independently and also enjoy collaboration and teamwork.

Q: Outside work?

A: Learning technology and driving.

Q: Hobbies?

A: Long drives, exploring places and learning technologies.

Q: AI projects that excite you?

A: Real-world AI applications, computer vision, intelligent detection systems and automation.

Q: Career goal?

A: Become a skilled AI professional building impactful intelligent systems.

Q: Where do you see yourself in 5 years?

A: An experienced AI Engineer contributing significantly to advanced projects.

Q: How do you learn?

A: Combining theory with practical implementation and projects.

Q: How do you solve problems?

A: Understand clearly, divide into parts, analyze and test solutions.

Q: Preferred work environment?

A: Supportive and collaborative environment encouraging growth.

Q: What makes you different?

A: Strong determination and continuous learning.

Q: Why should someone hire you?

A: Dedication, adaptability and willingness to learn and grow.

Q: Achievement you're most proud of?

A: Transitioning into real-world industry projects and contributing to AI solutions.
